Important For Your Safety

We have provided important safety messages in this manual. **ALWAYS** read and obey all safety messages.

This is the safety alert symbol.

This symbol alerts you to hazards that can kill or hurt you and others. All safety messages will be preceded by the safety alert symbol and the word “DANGER”, “WARNING”, or “CAUTION”.

These words mean:

⚠ DANGER IMMEDIATE HAZARDS THAT WILL RESULT IN SEVERE PERSONAL INJURY OR DEATH.

⚠ WARNING Hazards or unsafe practices that **COULD** result in severe personal injury or death.

⚠ CAUTION Hazards or unsafe practices that **COULD** result in minor personal injury or product or property damage.

This manual must be available to the person(s) overseeing and/or assembling the guardrail terminal system at all times. For additional copies, or if you have any questions about any portion of this manual, see below to contact Lindsay Transportation Solutions.

STANDARD LIMITED WARRANTY

Lindsay Transportation Solutions, Inc. (collectively with its parent company Lindsay Corporation and all other subsidiaries and affiliates directly and indirectly owned by Lindsay Corporation, "LTS") has tested the impact performance of certain of its barriers, crash cushion systems, and other highway safety hardware at an ISO-certified crash testing laboratory under controlled conditions pursuant to the test matrix criteria of NCHRP 350, MASH or EN-1317, as applicable, as designated by the American Association of State Highway and Transportation Officials ("AASHTO") and the Federal Highway Administration ("FHWA"), or the European Committee for Standardization ("CEN"). Such tests do not replicate every possible crash scenario and they are not intended to represent the performance of barriers, crash cushion systems, and other highway safety hardware when impacted in every real world impact condition or by every vehicle type. It is widely recognized that there are impact conditions that exceed the performance expectations of all highway safety equipment.

The products with which this limited warranty is provided (the "Products") are intended to be installed, operated, and maintained in a manner not inconsistent with instructional materials provided by LTS, the AASHTO Roadside Design Guide (as applicable), and state and federal guidelines (as applicable). Selection and proper installation, operation, and maintenance of any highway safety product, including the Products, is the responsibility of the highway authority and state department of transportation.

LTS EXPRESSLY DISCLAIMS ANY WARRANTY OR LIABILITY FOR CLAIMS ARISING BY REASONS OF DEATH OR PERSONAL INJURY OR DAMAGE TO PROPERTY RESULTING FROM ANY IMPACT, COLLISION OR HARMFUL CONTACT WITH THE PRODUCTS OR NEARBY HAZARDS OR OBJECTS BY ANY VEHICLE, OBJECTS, OR PERSONS, REGARDLESS OF WHETHER THE PRODUCTS WERE INSTALLED IN CONSULTATION WITH LTS OR BY THIRD PARTIES.

LTS warrants that any Product or component part manufactured by LTS will be free from defects in material or workmanship. LTS will replace free of cost any Product or component part manufactured by LTS that contains such a defect.

THE FOREGOING WARRANTY IS IN LIEU OF AND EXCLUDES ALL OTHER WARRANTIES NOT EXPRESSLY SET FORTH HEREIN, WHETHER EXPRESS OR IMPLIED BY OPERATION OF LAW OR OTHERWISE, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

LTS, in its sole discretion, may elect to disclaim the foregoing warranty benefits with respect to (i) any Products that have been inspected and determined by LTS, in its sole discretion, (a) to have been subject to improper storage, accident, misuse, or unauthorized alterations, or (b) that have not been installed, operated, and maintained in accordance with approved procedures and guidelines (including but not limited to instructions included in materials provided by LTS and the AASHTO Roadside Design Guide) and (ii) any components manufactured by the Buyer.

LTS' LIABILITY UNDER THIS WARRANTY IS EXPRESSLY LIMITED TO REPLACEMENT FREE OF COST (IN THE FORM AND UNDER THE TERMS ORIGINALLY SHIPPED), OR TO REPAIR BY LTS, OF PRODUCTS OR PARTS NOT COMPLYING WITH LTS SPECIFICATIONS, OR, AT LTS' ELECTION, TO THE REPAYMENT OF AN AMOUNT EQUAL TO THE PURCHASE PRICE OF SUCH PRODUCTS OR PARTS, WHETHER SUCH CLAIMS ARE FOR BREACH OF WARRANTY OR NEGLIGENCE. LTS SHALL NOT BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, OR SPECIAL LOSSES, DAMAGES, OR EXPENSES OF ANY KIND, INCLUDING, WITHOUT LIMITATION, ANY SUCH LOSSES, DAMAGES, OR EXPENSES ARISING DIRECTLY OR INDIRECTLY FROM THE SALE, HANDLING, OR USE OF THE PRODUCTS FROM ANY OTHER CAUSE RELATING THERETO, OR FROM PERSONAL INJURY OR LOSS OF PROFIT.

Any claim by the Buyer with reference to Products sold hereunder for any cause shall be deemed waived by the Buyer unless LTS is notified in writing, in the case of defects apparent on visual inspection, within ninety (90) days from the delivery date, or, in the case of defects not apparent on visual inspection, within twelve (12) months from the said delivery date. Products claimed to be defective may be returned prepaid to LTS' plant for inspection in accordance with return shipping instructions that LTS shall furnish to the Buyer forthwith upon receipt of the Buyer's notice of claim. If the claim is established, LTS will reimburse that Buyer for all carriage costs incurred hereunder.

MAX-Tension® Median TL-3 System Overview

The MAX-Tension® Median Guardrail Terminal System (MAX) is a re-directive, gating tension-based end terminal for corrugated W-Beam barrier systems in tangent configurations. The MAX system has been tested and evaluated per the recommendations set forth in the *Manual for Assessing Safety Hardware (MASH) Test Level 3 tests at 100 km/h (62.5 mph)*. The system utilizes tensioned cables and a cutting tooth to absorb kinetic energy and safely contain or redirect an impacting vehicle.

The system is comprised of a friction-based energy-absorbing impact head, two tensioned cables, a releasable Post 1, proprietary Post 2, a ground anchor assembly and an energy-absorbing coupler with integrated cutting tooth used in conjunction with standard AASHTO 12-gauge guardrail panels, post, blockouts, and hardware.

The MAX is applied directly to W-Beam guardrail systems at, or transitioned to, 31 in. (787mm) with panels and post spacing configured at mid-span splice. Transitions to strong post W-Beam guardrail systems or other barriers where the splice is not mid-span can be accomplished using 3 ft. 1-1/2 in. (0.95m), 9 ft. 4-1/2 in. (2.85m), or 15 ft. 7-1/2 in. (4.75m) panels after the MAX system [minimum 50 ft. (15.25m) downstream of the first post] in accordance with Federal, State, and Local standards. Transitions to other barrier systems such as thrie beam, rigid bridge or roadside barriers shall be in accordance with Federal, State, and Local requirements and attached after the MAX system [minimum 50 ft. (15.25m) downstream of the first post].

Recommended Tools

NOTE: The list of tools, safety equipment, and traffic control is a general recommendation and should not be considered a comprehensive list. Depending on the specific characteristics of the job site and the complexity of the repair or assembly, more or less tools may be necessary.

- Post Driver/Auger
- Soil Tamper
- Tape Measure
- String Line
- Chalk Line
- Marking Paint
- Level
- Hammer
- Crescent/Spud Wrench
- Pry Bar (recommended minimum 6' length)
- Vice Grips or Clamps
- 1-5/8" (42mm) Wrench
- 1/2" Ratchet
- 1-1/4" Socket
- 15/16" Socket
- 1-1/8" Socket
- 7/16" Socket
- Pipe Wrench or Large Pliers
- Impact Wrench (Optional)

Safety Equipment

- Safety Glasses
- Hearing Protection
- Gloves
- Steel Toe Boots
- Hard Hat
- Safety Vest

Traffic Control

- Traffic Control Equipment
- Traffic Control Plan

Preparation

The MAX-Tension™ Median Guardrail Terminal System (MAX™) is a re-directive, gating tensioned-based end terminal for corrugated W-Beam barrier systems in tangent configurations. The MAX is applied directly to W-Beam guardrail systems at, or transitioned to, 31 in. [787mm] with panels and post spacing configured at mid-span splice. Transitions to strong post W-Beam guardrail systems or other barriers where the splice is not mid-span can be accomplished using 3ft. 1-1/2in. [0.95m], 9ft. 4-1/2in. [2.85m], or 15ft. 7-1/2in. [4.75m] panels after the MAX system (minimum 50ft. [15.25m] downstream of the first post) in accordance with Federal, State, and Local standards. Transitions to other barrier systems such as thrie beam, rigid bridge or roadside barriers shall be in accordance with Federal, State, and Local requirements and attached after the MAX system (minimum 50ft. [15.25m] downstream of the first post).

Before installing the MAX system, ensure that all the materials required for the system are on site and have been identified.

Documentation

Prior to installation and assembly of the MAX-Tension™ Median system, ensure you have read and understand the installation and assembly instructions. The following items should be reviewed and understood prior to installation.

- Installation and Assembly Manual (Check for current revision posted at <http://www.barriersystemsinc.com/>)
- Installation and Assembly Video, Mobile App - The Lindsay Guide App is available as a free download from the Apple Store® and Google Play™.
- Installation and Assembly Video, Online - Full installation videos can be viewed online at <http://lindsay.guide>
- System Drawing (Current Revision)

Soil Conditions

The MAX-Tension™ Median system has been designed to be installed in soil that meets or exceeds the AASHTO “standard soil” specification. If the specific site soil conditions differ from those specified in the AASHTO standard soil specification, the installation should be reviewed and approved by the Project Engineer. If rock or stiff soil is encountered, the posts and soil anchor may be installed by auguring and backfilling the hole. Extra care must be taken to prevent settlement and lateral displacement of the posts. Backfill material should be compacted to optimum compaction using a tamper, per Local requirements.

Important Notes

- Ensure the MAX-Tension™ Median system is properly transitioned in accordance with Federal, State, and Local standards when attaching any other type of barrier system other than corrugated W-Beam.
- Do not attach the MAX-Tension™ Median system directly to a rigid barrier (e.g. concrete barrier, steel barrier, concrete structure) without proper transition.
- The term Upstream = Towards the impact head
- The term Downstream = Away from the impact head

Rail-To-Post Bolting Convention

The MAX-Tension Median System is designed to accommodate for varying rail-to-post bolting conventions when attaching to existing downstream rail. Shown below are various downstream rail-to-post bolting conventions. **Installers are to continue with the existing rail-to-post bolting convention into the MAX-Tension Median System.** This manual is demonstrating Convention A.

Upstream Bolting Convention - Approach rail bolts on "Upstream side, Opposing rail bolts on "Downstream" side of posts.

Alternative Bolting Convention - Both rail bolts on "Upstream" side of posts.

IMPACT HEAD DETAIL

CONVENTION A (RED), CONVENTION B (BLUE)

Site Grading

All testing was completed on a relatively flat and controlled testing environment. Ensure proper site grading prior to installation of the MAX-Tension™ Median system in accordance with Federal, State and Local specifications, in addition to the AASHTO Roadside Design Guide.

Source: AASHTO Roadside Design Guide, 4TH Edition 2011, page 8-6

System Offset Requirements

The MAX-Tension™ Median End Terminal system shall be installed parallel to the edge of the roadway. The system may be installed offset away from the roadway if specified and approved by the Project Engineer. If offset, the system shall be offset over the entire length of the system from the center of the last splice to the Soil Anchor.

Approved Offset

Test Level 3
0-2ft. (610mm)

Curve Installations

The MAX-Tension Median system **SHALL NEVER** be installed within a curved section of guardrail. It is recommended that the guardrail be extended past the curve before the installation of the MAX-Tension Median system. The MAX-Tension Median system should always be installed in a straight line over the length of the system.

Panel Lapping

The MAX-Tension Median system is a tension-based system that slides backwards upon impact. For the panels to slide properly, panel 1 must lap over panel 2, panel 2 must lap over panel 3, panel 3 must lap over panel 4 and panel 4 must lap over the existing rail system. This applies to both approach end and trailing end terminals, no matter the direction of traffic. Panels on secondary side must also lap with panel 1 over panel 2, panel 2 over panel 3, panel 3 over panel 4 and panel 4 over existing rail. Failure to follow this lapping pattern can result in serious injury or death.

Parts Identification

⚠ WARNING Use only Lindsay Transportation Solutions parts that are specified by Lindsay Transportation Solutions for use with the MAX-Tension Guardrail Terminal System. Do not use or co-mingle parts from other systems, as such configurations have not been tested nor have they been approved for use. The use of unspecified parts is prohibited and could result in severe personal injury or death.

* Additional quantity of 16 each are required to complete the installation and are **NOT** supplied in the kit or system.

Step 1 - Post Assembly and Installation

Dimension	
A	31" DOWNSTREAM GUARDRAIL
B	75" (1905mm) O.C. (Off Center)
C	72-3/4" (1848mm) O.C.
D	7-5/8" (194mm) Offset
E	37-1/2" (953mm) O.C.
F	31-7/8" (810mm) ALL POSTS

Item #	Part #	Description	QTY
4	BSI-161006-00	Post, I-BEAM, W 6 x 9, 6ft	1
11	BSI-1012078-00	Line Post	7
22	BSI-1705026-00	Crimped Post (Post 2)	1

The MAX-Tension Median guardrail end terminal is designed to attach to 31" W-beam guardrail systems. If the existing rail system is not 31" in height, ensure the guardrail end terminal is properly transitioned per Federal, State, and Local standards.

NOTE: Slot on post 1 (item 4) is facing upstream. Slot on post 2 (item 22) is facing downstream.

1.1 Assemble posts (items 4, 11, & 22) in the configuration shown. Ensure post height and post spacing follow the dimensions above.

NOTE: The spacing between post 5 & 6 and post 1 & 2 is unique.

NOTE: The detail above depicts a tangent system without an offset. If applying an allowable offset of 0-2 ft., modify the post offsets accordingly.

Step 2 - Ground Strut and Soil Anchor Installation

Item #	Part #	Description	QTY
1	BSI-1610060-00	Soil Anchor	1
2	BSI-1610061-00	Ground Strut	1
15	BSI-2001886	Bolt HH $\frac{5}{8}$ -11 x 7, 2in Threads	1
19	2001636	Wshr $\frac{5}{8}$ F436	2
20	4001116	Guardrail Nut Recessed $\frac{5}{8}$ -11	1

NOTE: To facilitate placement of the soil anchor (item 1), place the ground strut (item 2) in place prior to driving the soil anchor.

- 2.1 Assemble the ground strut (item 2) flush to the soil anchor (item 1) with hardware (items 15, 19, & 20) in configuration shown.
- 2.2 Tighten all hardware.

Step 3 - Blockout Installation

Item #	Part #	Description	QTY
12	B090534	W-Beam Composite Blockout 8in	16
18	2001840	Guardrail Bolt $\frac{5}{8}$ -11 x 10	6
20	4001116	Guardrail Nut Recessed $\frac{5}{8}$ -11	6
25	BSI-1707029-00	Hanger	2

NOTE: This manual is demonstrating Rail-To-Post Convention A. See page 10 for details.

NOTE: Only posts 2-9 require blockouts. Do not install blockout on post 1.

- 3.1 Install the blockouts (item 12) in the configuration shown.
- 3.2 Install hangers (item 25) on post 4 with hardware (items 18 & 20) as shown.
- 3.3 Secure blockouts (item 12) on post 5 & 6 with hardware (items 18 & 20) as shown.
- 3.4 Tighten all hardware.

NOTE: The hanger must be secured to post 4 and the blockouts must be secured to post 5 & 6 before hanging the rail using hardware items 18 and 20 as listed in the table above.

Step 4 - Install Rail 4 (Primary Side)

Item #	Part #	Description	QTY
13	BSI-4004386	W-Beam Guardrail RWM04a	1
18	2001840	Guardrail Bolt $5/8$ -11 x 10	2
20	4001116	Guardrail Nut Recessed $5/8$ -11	2

⚠ WARNING Use the same post-bolt convention within the MAX-Tension Median system that is used on the existing side of the downstream guardrail system. See Rail-To-Post Bolting Convention on page 10.

⚠ DANGER RAIL 4 IS LAPPED OVER TOP OF RAIL 5. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

4.1 Install rail 4 (item 13) over existing rail 5 as shown in configuration above.

NOTE: Hardware used to splice rails 4 and 5 is not supplied with the system. This hardware shall be supplied by the end user. Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

4.2 Secure rail 4 (item 13) to post 9 and post 8 using hardware (items 18 & 20).

NOTE: Do not install any type of washer (e.g., rectangular washer) or delineator between the post bolt head and the guardrail.

4.3 Tighten all hardware.

Step 5 - Assemble Inner Side Slider (ISS) Panel on Rail 3 (Primary Side)

Item #	Part #	Description	QTY
6	BSI-1610065-00	Inner Side Slider (ISS) Panel	1
13	BSI-4004386	W-Beam Guardrail RWM04a	1
17	4001115	Guardrail Bolt $5/8$ -11 x 1- $1/4$	8
20	4001116	Guardrail Nut Recessed $5/8$ -11	8

5.1 Prior to installing rail 3 (item 13), secure the inner side slider (ISS) panel (item 6) on upstream end of rail 3 (item 13) using the supplied hardware (items 17 & 20).

NOTE: Secure inner side slider (ISS) panel on the non-traffic side of the rail.

NOTE: Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

5.2 Tighten all hardware.

Step 6 - Install Rail 3 (Primary Side)

Item #	Part #	Description	QTY
17	4001115	Guardrail Bolt $5/8$ -11 x 1- $1/4$	8
18	2001840	Guardrail Bolt $5/8$ -11 x 10	1
20	4001116	Guardrail Nut Recessed $5/8$ -11	9

⚠ DANGER RAIL 3 IS LAPPED OVER TOP OF RAIL 4. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

6.1 Install the preassembled rail 3 with attached inner side slider (ISS) panel in configuration shown in Step 5.

6.2 Splice rails 3 and 4 using hardware (items 17 & 20).

NOTE: Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

6.3 Secure rail 3 to post 7 using hardware (items 18 & 20).

NOTE: Do not install any type of washer (e.g., rectangular washer) or delineator between the post bolt head and the guardrail.

NOTE: Rail 3 is not bolted at post 6. Ensure that the blockout on post 6 has already been secured with a bolt (See Step 3).

6.4 Tighten all hardware.

Step 7 - Install Rail 1 (Primary Side)

Item #	Part #	Description	QTY
13	BSI-4004386	W-Beam Guardrail RWM04a	1
18	2001840	Guardrail bolt $5/8$ -11 x 10	2
20	4001116	Guardrail Nut Recessed $5/8$ -11	2

NOTE: Rail 1 will be installed on the posts before rail 2 is installed.

- 7.1 Install rail 1 (item 13) in configuration shown.
- 7.2 Secure rail 1 to post 3 and post 2 using hardware (items 18 & 20). Only hand tighten at this time. **DO NOT secure the rail at post 1 at this time.**

NOTE: Do not install any type of washer (e.g., rectangular washer) or delineator between the post bolt head and the guardrail.

Step 8 - Assemble Traffic Side Slider (TSS) and Tooth on Rail 2 (Primary Side)

Item #	Part #	Description	QTY
5	BSI-1610064-00	Traffic Side Slider (TSS) Panel	1
7	BSI-1610066-00	Tooth	1
13	BSI-4004386	MASH W-Beam Guardrail RWM04a	1
17	4001115	Guardrail Bolt $5/8$ -11 x $1-1/4$	8
20	4001116	Guardrail Nut Recessed $5/8$ -11	9

- 8.1 Prior to installing rail 2 (item 13), assemble the traffic side slider (TSS) panel (item 5) and tooth (item 7) on the trailing end of rail 2 (item 13) in the configuration shown.
- 8.2 Secure the traffic side slider (TSS) panel (item 5) to the outside of rail 2 (item 13) using hardware (items 17 & 20). The arrow shall point toward the front of the system.

NOTE: Bolts shall be installed with the bolt heads on the non-traffic side and nuts on the traffic side.

- 8.3 Secure the tooth (item 7) using nut (item 20). Only hand tighten at this time. The RSS engagement hook on the tooth shall point toward the front of the system.
- 8.4 Tighten all hardware except the nut (item 20) on the tooth (item 7). The nut will be tightened during Step 22.

Step 9 - Install Rail 2 (Primary Side)

Item #	Part #	Description	QTY
17	4001115	Guardrail Bolt $5/8$ -11 x 1- $1/4$	8
20	4001116	Guardrail Nut Recessed $5/8$ -11	8

⚠ DANGER RAIL 1 IS LAPPED OVER TOP OF RAIL 2. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

⚠ DANGER RAIL 2 IS LAPPED OVER TOP OF RAIL 3. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

NOTE: Rail 2 should be overlapped by rail 1.

NOTE: Rails 2 and 3 will not be spliced together. When installing rail 2 over rail 3, ensure the tooth goes through elongated slot on rail 3.

9.1 Install the preassembled rail 2 with attached traffic side slider (TSS) panel behind rail 1 and on hanger (item 25) ensuring the tooth goes through the slot on rail 3.

NOTE: Rail 2 is not bolted at Post 4 and 5. Ensure that blockouts on Post 4 and 5 have already been secured with a bolt, with blockouts at Post 4 secured with Panel Hanger.

9.2 Splice rails 1 and 2 using hardware (items 17 & 20).

9.3 Tighten all hardware.

Step 10 - Install Rail 4 (Secondary Side)

Item #	Part #	Description	QTY
13	BSI-4004386	W-Beam Guardrail RWM04a	1
18	2001840	Guardrail Bolt $5/8$ -11 x 10	2
20	4001116	Guardrail Nut Recessed $5/8$ -11	2

WARNING Use the same post-bolt convention within the MAX-Tension Median system that is used on the existing side of the downstream guardrail system. See Rail-To-Post Bolting Convention on page 10.

DANGER RAIL 4 IS LAPPED OVER TOP OF RAIL 5. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

10.1 Install rail 4 (item 13) over existing rail 5 as shown in configuration above.

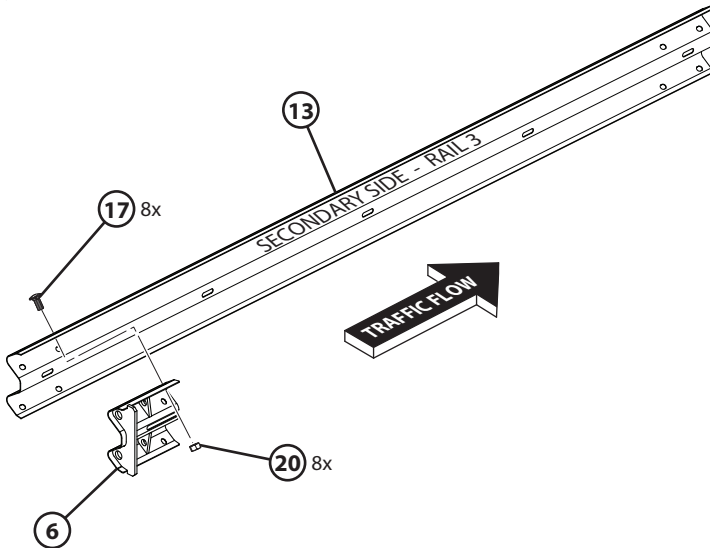

NOTE: Hardware used to splice rails 4 and 5 is not supplied with the system. This hardware shall be supplied by the end user. Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

10.2 Secure rail 4 (item 13) to post 9 and post 8 using hardware (items 18 & 20).

NOTE: Do not install any type of washer (e.g., rectangular washer) or delineator between the post bolt head and the guardrail.

10.3 Tighten all hardware.

Step 11 - Assemble Inner Side Slider (ISS) Panel on Rail 3 (Secondary Side)

Item #	Part #	Description	QTY
6	BSI-1610065-00	Inner Side Slider (ISS) Panel	1
13	BSI-4004386	W-Beam Guardrail RWM04a	1
17	4001115	Guardrail Bolt $5/8$ -11 x 1- $1/4$	8
20	4001116	Guardrail Nut Recessed $5/8$ -11	8

11.1 Prior to installing rail 3 (item 13), secure the inner side slider (ISS) panel (item 6) on upstream end of rail 3 (item 13) using the supplied hardware (items 17 & 20).

NOTE: Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

11.2 Tighten all hardware.

Step 12 - Install Rail 3 (Secondary Side)

Item #	Part #	Description	QTY
17	4001115	Guardrail Bolt $\frac{5}{8}$ -11 x $1\text{-}1\frac{1}{4}$	8
18	2001840	Guardrail Bolt $\frac{5}{8}$ -11 x 10	1
20	4001116	Guardrail Nut Recessed $\frac{5}{8}$ -11	9

⚠ DANGER RAIL 3 IS LAPPED OVER TOP OF RAIL 4. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

12.1 Install the preassembled rail 3 with attached inner side slider (ISS) panel in configuration shown in Step 11.

12.2 Splice rails 3 and 4 using hardware (items 17 & 20).

NOTE: Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

12.3 Secure rail 3 to post 7 using hardware (items 18 & 20).

NOTE: Do not install any type of washer (e.g., rectangular washer) or delineator between the post bolt head and the guardrail.

NOTE: Rail 3 is not bolted at post 6. Ensure that the blockout on post 6 has already been secured with a bolt (See Step 3).

12.4 Tighten all hardware.

Step 13 - Install Rail 1 (Secondary Side)

Item #	Part #	Description	QTY
13	BSI-4004386	MASH W-Beam Guardrail RWM04a	1
18	2001840	Guardrail bolt $5/8$ -11 x 10	2
20	4001116	Guardrail Nut Recessed $5/8$ -11	2

NOTE: Rail 1 will be installed on the posts before rail 2 is installed.

13.1 Install rail 1 (item 13) in configuration shown.

13.2 Secure rail 1 to post 3 and post 2 using hardware (items 18 & 20). Only hand tighten at this time. **DO NOT secure the rail at post 1 at this time.**

NOTE: Do not install any type of washer (e.g., rectangular washer) or delineator between the post bolt head and the guardrail.

Step 14 - Assemble Traffic Side Slider (TSS) on Rail 2 (Secondary Side)

Item #	Part #	Description	QTY
5	BSI-1610064-00	Traffic Side Slider (TSS) Panel	1
13	BSI-4004386	MASH W-Beam Guardrail RWM04a	1
17	4001115	Guardrail Bolt $5/8$ -11 x 1- $1/4$	8
20	4001116	Guardrail Nut Recessed $5/8$ -11	8

⚠ DANGER TOOTH IS NOT TO BE INSTALLED ON SECONDARY SIDE.

- 14.1 Prior to installing rail 2 (item 13), assemble the traffic side slider (TSS) panel (item 5) on the trailing end of rail 2 (item 13) in the configuration shown.
- 14.2 Secure the traffic side slider (TSS) panel (item 5) to the outside of rail 2 (item 13) using hardware (items 17 & 20). The arrow shall point toward the front of the system.

NOTE: Bolts shall be installed with the bolt heads on the non-traffic side and nuts on the traffic side.

- 14.3 Tighten all hardware.

Step 15 - Install Rail 2 (Secondary Side)

Item #	Part #	Description	QTY
17	4001115	Guardrail Bolt $\frac{5}{8}$ -11 x 1- $\frac{1}{4}$	8
20	4001116	Guardrail Nut Recessed $\frac{5}{8}$ -11	8

⚠ DANGER RAIL 1 IS LAPPED OVER TOP OF RAIL 2. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

⚠ DANGER RAIL 2 IS LAPPED OVER TOP OF RAIL 3. THIS IS DONE REGARDLESS OF AN UPSTREAM OR DOWNSTREAM END SYSTEM POSITION.

NOTE: Rail 2 should be overlapped by rail 1.

NOTE: Rails 2 and 3 will not be spliced together.

15.1 Install the preassembled rail 2 with attached traffic side slider (TSS) panel behind rail 1 and on hanger (item 25).

NOTE: Rail 2 is not bolted at Post 4 and 5. Ensure that blockouts on Post 4 and 5 have already been secured with a bolt, with blockouts at Post 4 secured with Panel Hanger.

15.2 Splice rails 1 and 2 using hardware (items 17 & 20).

15.3 Tighten all hardware.

Step 16 - Install Impact Head

Item #	Part #	Description	QTY
3	BSI-1706013-00	Impact Head	1
14	BSI-1102027-00	Washer, Square	1
17	4001115	Guardrail Bolt $5/8$ -11 x 1- $1/4$	16
20	4001116	Guardrail Nut Recessed $5/8$ -11	17
21	BSI-2001888	Bolt CH $5/8$ -11 x 2 Fully Threaded	1
24	4002051	Guardrail Wshr Rect AASHTO	1

⚠ DANGER ALWAYS LAP RAIL 1 OVER THE IMPACT HEAD.

- 16.1 Install the impact head (item 3) between both rails as shown.
- 16.2 Splice the impact head (item 3) to both rails using hardware (items 17 & 20).

NOTE: Bolts shall be installed with the bolt heads on the non-traffic side and nuts on the traffic side. Ensure that impact head is perpendicular to the roadway. **Reference page 10 for opposing traffic bolt hole set.**

- 16.3 Secure the impact head (item 3) and rail 1 to post 1 in the configuration shown.
- 16.4 Ensure that the rectangular washer (item 24) is placed between the bolt head (item 21) and rail 1 and that the square washer (item 14) is used on the backside between post 1 and the nut (item 20).
- 16.5 Tighten hardware (items 18 & 20) securing rails to post 2 and post 3.
- 16.6 Tighten all hardware.

Step 17 - Install Cables (Primary Side)

Item #	Part #	Description	QTY
9	B061058	BSI, Cable Friction Plate	1
10	BSI-1610069-00	Cable Assembly (Includes Sleeve, Nuts & Washers)	2

- 17.1 Install the friction plate (item 9) and cables (item 10) in configuration shown.
 - 17.2 **IMPORTANT:** Insert the end of the cables with the sleeve into the ground strut one at a time and secure with nut and washer provided with cable. **DO NOT** tighten at this step. The sleeve shall rest between the impact head and tabs on the ground strut. The sleeve shall rest a minimum of 6 inches below the impact head.
- NOTE:** The cable closest to the traffic side of the system must pass through the bottom hole of the impact head. The second cable must pass through the top hole.
- 17.3 Ensure that the friction plate (item 9) is inserted through the top of the impact head (item 3) while passing the cables (item 10) through the impact head (item 3).
 - 17.4 Pass the cables (item 10) along the backside of rails 1 and 2 until reaching the ISS panel. Ensure that the threads on the cable pass through the holes on the ISS panel and secure cable with nut supplied with cable. **DO NOT** tighten the cables at this time.

Step 18 - Install Cables (Secondary Side)

Item #	Part #	Description	QTY
26	BSI-1703105-00	Cable Assembly (Includes Sleeve, Nuts & Washers)	2

18.1 Install cables (item 26) in configuration shown.

18.2 Insert the cables (item 26) into the impact head one at a time and secure with nut and washer provided with cable. **DO NOT** tighten at this step.

NOTE: Threads should protrude approximately 2" through the impact head.

18.3 Pass the cables (item 26) along the backside of rails 1 and 2 until reaching the ISS panel. Ensure that the threads on the cable pass through the holes on the ISS panel and secure cable with nut supplied with cable. **DO NOT** tighten the cables at this time.

Step 19 - Turn Friction Plate

Item #	Part #	Description	QTY
16	BSI-2001885	Bolt HH ³ / ₄ -10 x 3, Fully Threaded	4

- 19.1 Install bolts (item 16) on the side of the impact head (item 3) in configuration shown.
- 19.2 Using a pry bar, turn the friction plate as in configuration shown.
- 19.3 Tighten the bolts (item 16) on the side of the impact head (item 3) and turn the friction plate simultaneously until the friction plate reaches its engaged position and the bolts are completely tightened.

⚠ WARNING Once the friction plate has been turned, the cables cannot be reused.

⚠ CAUTION A minimum of two people should be used to turn the friction plate.

Step 20 - Tighten Cables (Primary Side)

- 20.1 Tighten cable nuts both front and rear in configuration shown.
- 20.2 While tightening the cables, ensure that the cable does not spin by holding the swage with large pliers or pipe wrench.
- 20.3 Tighten until there is no visible sag in the cables.

Step 21 - Tighten Cables (Secondary Side)

- 21.1 Tighten cable nuts both front and rear in configuration shown.
- 21.2 While tightening the cables, ensure that the cable does not spin by holding the swage with large pliers or pipe wrench.
- 21.3 Tighten until there is no visible sag in the cables, ensuring even tension between the primary and secondary side cables.

Step 22 - Install Rear Side Slider (RSS) Plate and Tighten Tooth (Primary Side)

Item #	Part #	Description	QTY
8	BSI-1610067-00	Rear Side Slider (RSS) Plate	1
17	4001115	Guardrail Bolt $\frac{5}{8}$ -11 x 1- $\frac{1}{4}$	8
20	4001116	Guardrail Nut Recessed $\frac{5}{8}$ -11	8

22.1 Install rear side slider (RSS) plate (item 8) in configuration shown using the supplied hardware (items 17 & 20).

NOTE: Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

NOTE: Ensure the arrows on the TSS and RSS are aligned and pointing towards the impact head and the tooth passes through the RSS plate opening.

22.2 Tighten the nut securing the tooth that was hand tightened in Step 7.

22.3 Tighten all remaining hardware.

Step 23 - Install Rear Side Slider (RSS) Plate (Secondary Side)

Item #	Part #	Description	QTY
8	BSI-1610067-00	Rear Side Slider (RSS) Plate	1
17	4001115	Guardrail Bolt $5/8-11 \times 1-1/4$	8
20	4001116	Guardrail Nut Recessed $5/8-11$	8

23.1 Install rear side slider (RSS) plate (item 8) in configuration shown using the supplied hardware (items 17 & 20).

NOTE: Bolts shall be installed with the bolt heads on the traffic side and nuts on the non-traffic side.

NOTE: Ensure the arrows on the TSS and RSS are aligned and pointing towards the impact head.

23.2 Tighten all hardware.

Step 24 - Install Delineation Bracket

Item #	Part #	Description	QTY
23	BSI-2001887	Screw SD,HH 1/4-20 x 3/4, 410 SS	3
27	BSI-1706010-00	Bracket, Delineation Mounting	1

24.1 Install delineation decal per Federal, State, and Local Standards.

24.2 Install delineation bracket (item 27) in configuration shown using screw (item 23).

24.3 Tighten all hardware.

Step 25 - Install Cable Clamps

Item #	Part #	Description	QTY
28	BSI-4004455	Clamp, Cable	2

25.1 Install cable clamps (item 27) in configuration shown.

NOTE: Primary cables only, cable clamps to be installed between the impact head and cable tube. Clamps should be a minimum of 6 in. away from impact head

25.2 Tighten clamp hardware.

Inspector Checklist Confirm all items in checklist have been properly completed.

Inspection		
Date	By	Item
		Slot on post 1 is facing upstream; Slot on post 2 is facing downstream. (Pg. 17, Step 1)
		System installed without offset or with allowable offset of 0-2 ft. (Pg. 17, Step 1)
		System height shall be 31" +/- 1". (Pg. 17, Step 1)
		Post spacing should be 75" at top of the post for all system spaces except space between posts 1-2, and 5-6. Space between posts 1-2 should measure 37 1/2"; space between posts 5-6 should measure 72 3/4", both measured at top of post. (Pg. 17, Step 1)
		Bolt, two washers, and guardrail nut are installed at the base of post 1 connecting post 1 to the ground strut. (Pg. 18, Step 2)
		No blackout at post 1. (Pg. 19, Step 3)
		Posts 4, 5 and 6 are not connected to rails on both sides of the system. Rail 2 supported by panel hangers at post 4. (Pages 19, 22, 25, 28, and 31; Steps 3,6, 9, 12 and 15)
		Slider Joint - inner side slider (ISS) should be attached to upstream end of rail 3 with nuts on non-traffic side. (Pg. 21, Step 5; Pg. 27, Step 11)
		Slider Joint - traffic side slider (TSS) should be attached to downstream end of rail 2 with nuts on the traffic side and arrow pointing toward the front of the system. (Pg. 23 Step 7; Pg. 30, Step 14)
		Tooth is installed and engaged in the slot at the slider joint, primary side only. No tooth on secondary side. (Pg. 24, Step 8)
		Tooth should be oriented with RSS panel engagement hook facing front of system. (Pg. 24, Step 8)
		Guardrail panels should be lapped with the upstream most rail on the outside. Rail 1 over rail 2, rail 2 over rail 3, rail 3 over rail 4, and rail 4 over existing rail. (Pg. 25, Step 9; Pg. 31, Step 15)
		Rail 1 and rail 2 spliced with guardrail nuts on outside. (Pg. 25, Step 9; Pg. 31, Step 15)
		Secondary side rail 1 bolted to correct slot set on impact head so impact head is perpendicular to roadway. (Pg.32, Step 16)
		Guardrail nuts on impact head are on the outside. (Pg 32, Step 16)
		Rectangular washer and square washer used at post 1. (Pg 32, Step 16)
		Friction plate is installed inside impact head with cables in the proper position. (Pg. 33, Step 17)
		Cable sleeves are at front of system. Sleeves shall rest min. of 6" away from the impact head. (Pg. 33, Step 17)
		From the groundstrut and soil anchor, the cable closest to the traffic side of the system passes through the bottom hole on the impact head. (Pg. 33, Step 17)
		Friction plate is turned to engaged position with cables in the proper position. (Pg. 35, Step 19)
		Friction plate bolts are completely tightened with cables in the proper position. (Pg. 35, Step 19)
		Cables should be taut and not visibly sagging. (Pg. 36, Step 20; Pg. 37, Step 21)
		Slider Joint - rear side slider (RSS) should be attached with the nuts on the non-traffic side and arrow pointing toward the front of the system. (Pg. 38, Step 22; Pg. 39, Step 23)
		TSS and RSS arrows should be aligned so as to see through them when installed. (Pg. 38, Step 22; Pg 39 Step 23)
		8 bolts should connect the TSS to the RSS. (Pg. 38, Step 22; Pg 39 Step 23)
		Cable clamps installed a minimum of 6 in. away from the impact head. (Pg. 41, Step 25)
Inspector signature:		Date:

Maintenance Inspection

Guardrail terminals, like all roadside safety hardware, require inspection to ensure they are in acceptable working condition. Regular inspections of the MAX-Tension Median system are recommended and shall be made by the Local highway authority. Frequency of the inspections shall be made based on site conditions, traffic volumes, and crash history. Please follow the Local guidelines for frequency of inspections to ensure adequate repairs are made to the system. Walk-up inspections are recommended at least twice a year. The MAX-Tension Median system shall be inspected for damage after every impact. Repairs shall be made accordingly using Lindsay Transportation Solutions components as specified in the product drawings.

Visual Drive-By Inspections – Recommended Frequency – Monthly

Check for:

- Damage caused by vehicle impacts
- Minor damage cause by impacts from roadside maintenance equipment
- Misalignment
- Missing components
- Damage from vandalism
- Loose hardware

Maintenance Inspection (Cont.)

Walk-Up Inspections – Recommended Frequency – Twice a Year

Before performing walk-up inspections, ensure traffic control is deployed in accordance with Local guidelines.

Check for:

- Damage caused by vehicle impacts
- Minor damage cause by impacts from roadside maintenance equipment
- Misalignment
- Missing components
- Damage from vandalism
- Sagging cables
- Clear and dispose of any debris in and around the system
- Cutting tooth is in correct position
- Disengaged friction plate
- Frayed cable
- Grading around the system
- Loose hardware
- The cable sleeves shall rest a minimum of 6 inches below the impact head.

After inspection is complete, ensure all items identified during the inspection process are corrected. The MAX-Tension Median System shall be returned to proper condition as outlined in the installation instructions.

Maintenance Inspection (Cont.)

Walk-Up Inspection	
Item	Comment
Damage caused by vehicle impacts	
Minor damage caused by impacts from roadside maintenance equipment	
Misalignment	
Missing components	
Damage from vandalism	
Sagging cables	
Clear and dispose of any debris in and around the system	
Cutting tooth is in correct position	
Disengaged friction plate	
Frayed cable	
Grading around system	
Loose hardware	
The cable sleeves shall rest a minimum of 6 inches below the impact head.

If any of the above items are identified during the walk-up inspection, swift action should be taken to repair and return the MAX-Tension Median Guardrail Terminal System (MAX) to the proper condition as outlined in this manual.

In addition to the items listed above, all items in the Inspector Checklist (Pg. 42) should be checked.

MAX-TENSION MEDIAN, TL-3 SYSTEM IMPERIAL HW, STEEL POST, 8 IN TIMBER BLOCKOUTS, 25' PANELS					
DRAWING NO. MM-3358W4					

- NOTES UNLESS OTHERWISE SPECIFIED:
- SYSTEM TO BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S INSTRUCTIONS.
 - SEE ASSEMBLY AND INSTALLATION MANUAL FOR ADDITIONAL DETAILS.
 - A SPRING CAP WITH A RUBBER OR PLASTIC INSERT SHALL BE USED WHEN DRIVING CABLES INTO THE HOLES OF THE STEEL POSTS.
 - CABLES SHALL BE TIGHTENED USING THE METHOD OF THIS PANEL (ITEM 1) UNTIL THEY ARE NOT VISIBLE SAGGING BETWEEN POSTS. DO NOT TIGHTEN THE CABLES AT THE FRONT OF THE CURB AND/OR ANCHOR.
 - SYSTEM SHOWING USING STEEL WIRE FRAMING POST WITH COMPOSITE BLOCKOUTS.
 - PANELS NOT CONNECTED TO BLOCKOUT OR POSTS.
 - IMPACT HEAD (ITEM 7) NEEDED ON REAR OF GUARDRAIL PANELS, BOTH SIDES.
 - CUTTING TOOTH (ITEM 18) IS TO BE INSTALLED ON APPROACH TRAFFIC SIDE.
 - ALL STEEL COMPONENTS ARE GALVANIZED PER ASTM A753 OR EQUIVALENT UNLESS OTHERWISE STATED.
 - IF TENSIONING WARES IS REQUIRED, WARES SHALL BE IN ACCORDANCE WITH LOCAL STANDARDS AND SPECIFICATIONS.
 - FOR SPECIFICATIONS SEE DRAWING SPECIFICATIONS.
 - THIS DRAWING IS A PART OF THE MAX-TENSION MEDIAN, TL-3 SYSTEM. ALL OTHER PARTS OF THE MAX-TENSION MEDIAN, TL-3 SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH THE MAX-TENSION MEDIAN, TL-3 SYSTEM MANUAL.
 - RECEIVED HEX NUTS TO BE INSTALLED ON TRAFFIC SIDE.
 - TIGHTEN AFTER PRIMARY CABLES (ITEM 13) HAVE BEEN TENSIONED AND SET, THEN USING HEX NUTS IN FRONT OF IMPACT HEAD UNTIL CABLES ARE NO LONGER SAGGING.

Drawings MAX-TENSION MEDIAN TL-3 SYSTEM COMPONENTS

Long-Term Storage

Store materials under cover in dry, well-ventilated conditions, away from doorways open to the environment.

Provide adequate ventilation between stacked pieces. Elevate and separate articles stacked outdoors with spacers (poplar, ash, spruce).

Incline parts to allow for maximum drainage.

Avoid stacking material directly on soil or decaying vegetation.

For crated items, remove the lids to provide better ventilation and drying of the galvanized parts. Customers will need to remove kits packed in cardboard boxes from the crates and store them inside.
